

eLearning Safety Management Systems (SMS) for Aviation Professionals

FlightSafety International and the International Business Aviation Council (IBAC) have co-developed this Safety Management Systems (SMS) course designed for flight department professionals at all levels of the organization. The course takes a scenario-based approach, using relatable, even humorous, real-life situations to introduce the learner to the fundamental concepts of Safety Management Systems and focuses on fostering a proactive, positive safety culture.

This online course is intended for professionals working within daily flight department operations, including pilots, maintenance personnel, flight attendants, dispatchers, line personnel and administrative staff. The course was developed to provide a means for operators to meet their SMS training requirements, as specified in the ICAO and IS-BAO SMS standards, for all personnel involved in the operation. After successfully completing the course and passing the examination, you are issued a Certificate of Completion.
