

In the immediate aftermath of the September 11, 2001 attacks, Congress enacted the Aviation and Transportation Security Act (ATSA). This act not only created the Transportation Security Administration (TSA) which transferred aviation security from the FAA to the TSA, but also contained provisions for the security responsibilities of air carriers.

Section 132A of the ATSA created special regulations called the Twelve-Five Standard Security Program, or TFSSP. This section specifies security measures and requirements unique to scheduled and charter passenger and cargo operations traveling within, to and from, or outside the United States that use aircraft with a maximum takeoff weight greater than 12,500 pounds. FlightSafety's TSA Security course will fulfill the training requirements on TSA-specific security procedures for pilots who operate aircraft of 12,500 pounds or more.

Once you have completed the course and passed the examination, you are awarded a FlightSafety International certificate of completion. If you are an existing FlightSafety customer, you can also pick up your record of training in myFlightSafety.
