

PERFORMANCE VECTOR PLUS

A Welcome Return on Your Safety Investment

Performance Vector PLUS is an individual good experience program that returns a significant percentage of premium to business aviation operators who avoid losses while meeting meaningful safety standards. Performance Vector PLUS seeks to reward current safety efforts, or provide an incentive to encourage additional safety steps.

Three Opportunities for Good Experience Returns

The program provides good experience returns to business aviation operators who meet any of three safety standards during a policy year while also avoiding loss claims. Each standard met earns a 5 percent good experience return for a potential total return of 15 percent.

- ▶ Achieve and maintain IS-BAO registry – an internationally recognized safety standard - OR - meet the requirements of a BASC full-service member organization.
- ▶ Ensure that all pilots successfully complete twice-yearly simulation-based training in the make and model flown.
- ▶ Successfully implement an industry-recognized flight operations quality assurance (FOQA) program that covers all aircraft operated.

Additional Benefits

Qualified business aviation operators who meet all three can earn a total good experience return of 15 percent and additionally, receive two selections from our Performance Vector menu of safety services, thereby doubling the annual safety benefit.
